Case: Surgical intervention

BAPSCARCARE

Case study description

Patient age/gender : 38 years / female
Cause : multiple fractures of the right forearm, surgery to ensure realignment (plates)
Why scar treatment : early stage hypertrophic scar development
Therapy : 4 months BAPSCARCARE T in combination with BAPSCARCARE gel

Conclusion medical team

- Significantly reduced vascularity (redness).
- Less pigmentation and improved flexibility of the skin.
- Reduced scar thickness.
- Advised to continue the therapy. Combining the silicone sheet with the silicone gel, results in a higher compliance.

Patient experience

- Improved overall appearance of the scar
- Both BAPSCARCARE T and BAPSCARCARE gel are easy to use.

Case study: Prof. C.M. Durante MD, Istituto Estetico Italiano and G. Ciprandi MD, PhD, Ospedale Pediatrico Bambino Gesù, Roma, Italy
