

SPECIFICATION

Cleartest D-Dimer D-dimer, 10 tests

D-Dimer is a fibrin degradation product, a small protein fragment present in the blood after a blood clot is degraded by fibrinolysis.

This test enables the preclusion of a pulmonary embolism, deep venous thrombosis or disseminated intravascular coagulation.

Sensitivity: 500 ng/ml.

Results after 10 minutes.

Storage: 2 - 30 °C, do not freeze.

Single dropper bottle for the buffer solution, so there is no possibility of transmission and there is sufficient reagents for each cassette.

Important Note: With patients that have acute chest pain and shortness of breath a higher D-Dimer value and the absence of typical cardiac marker changes indicate a pulmonary embolism.
